BROCHURES

Nature's Flame
Fuelling Your Future

100% – Reliable, Sustainable, New Zealand
Nature's Flame wood pellets provide numerous benefits for businesses who use this unique fuel in heating appliances and large-scale boilers. Pellets are a sustainable, versatile, and convenient option and are popular in industrial processes for their energy-efficiency and affordability.
The use of pellets for producing steam or heat is the optimal solution for companies that are committed to reduce their energy costs to gain competitiveness and reduce their greenhouse gas emissions.
Nature's Flame wood pellets are entirely made from waste and have the lowest carbon footprint because they are made in the only facility in the world to use hydro-electric and geothermal energy for processing.
Nature's Flame is part of the Forest Stewardship Council® Chain of Custody Certification. This chain starts with the logging companies and ensures that every tree cut down is replaced with another to create a carbon-neutral circle, where the carbon omitted by the timber process is absorbed by the tree that takes its place.
New Zealand's largest wood pellet manufacturer with production expanding to 150,000 tonnes.

Nature's Flame
REDUCING RELIANCE ON FOSSIL FUELS

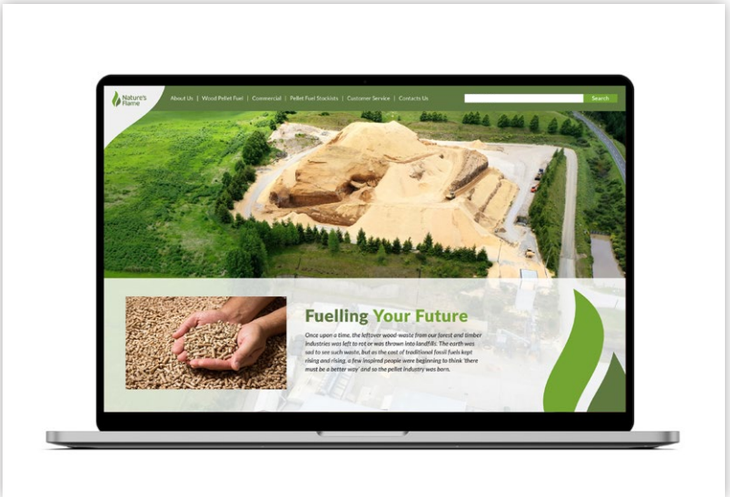

Since 2003 Nature's Flame has established itself as a reliable manufacturer and supplier of premium and industrial wood pellets. Our founders were among the first in New Zealand to recognise the potential for effective heating and the environmental benefits from recycling an otherwise wasteful product – sawmilling residue into a fuel with high energy density and a reliable and consistent quality.
Today, Nature's Flame is New Zealand's largest wood pellet manufacturer and part of an innovative and dynamic sector in the New Zealand energy industry. The company currently produces 90,000 tonnes of premium wood pellets per year in our plant in Taupo, right in the heart of the New Zealand timber industry. This output will increase to 150,000 tonnes by early 2023 with an expansion of the Taupo plant currently underway.
Our easy access to the raw fibres, large manufacturing capacity and proximity to two ports (Tauranga and Napier) ensures a secure and reliable supply of pellets to our customers at home and abroad.
Minimum net calorific value 17 MJ/kg
Premium New Zealand wood pellet fuel

Fuelling Your Future
Once upon a time, the leftover wood-waste from our forest and timber industries was left to rot or was thrown into landfills. The earth was sad to see such waste, but as the cost of traditional fossil fuels kept rising and rising, a few inspired people were beginning to think 'there must be a better way' and so the pellet industry was born.
